Art Unit: 2891

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 18-19 are rejected under 35 U.S.C. 102(b) as being anticipated by  
Osann – US 6,133,582.

Osann (text in col. 7, line 8 to col. 11, line 47) discloses the claimed invention by increasing the manufacturing yield for a device by testing the number of functioning layers (edge interconnections) of a vertically stacked device with multiple layer die.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 20-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Osann.

Osann is applied as above and does not disclose to store health data with known good or bad layers. However, Osann has stated at col. 11, lines 11-35 that circuits having tests are assigned to a particular yield bin.

It would have been obvious and reasonable to one of ordinary skill in the art at the time the invention was made to store health data with known good or bad layers to accurately attain the customer's application specific design.

Claims 1-7, 9, 11-17 are allowed.

Applicant's arguments filed on September 6, 2005 have been fully considered but they are not persuasive.

Osann clearly discloses diagnostics and sorting the wafer stacks based on the number of good layers. The health data as regards to hospitals and medical devices referred to in the previous office action is just one of many examples to store data. Osann has clearly stated to place wafers in certain bins depending on the customer's application specific design.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-**

MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chandra Chaudhari whose telephone number is 571-272-1688. The examiner can normally be reached on Mon - Fri (9:00-5:30).
